

# HIGH DENSITY POLYETHYLENE PIPE

*Durable, long-lasting water logistics solutions ideal for produced water infrastructure and environmentally sensitive operations. Quickly deploy and automate water networks reliably with your water experts.*

## LEADERS IN THE PERMIAN BASIN

### EXPERIENCE THAT LEADS

Incorporating a workforce of over 50 employees, our poly team has been servicing the Permian Basin for over 50 years. This expertise encompasses a strong leadership position in specialized field operations including rigging up/down processes and deployment methodologies of polyethylene pipe. With 20 dedicated poly teams operating daily in the Permian Basin, they demonstrate the capability to promptly accommodate evolving on-site conditions.

### DURABILITY

We offer poly pipe ranging from 100 psi to 335 psi pressure ratings to meet your project needs. This pipe exhibits exceptional durability and endurance, making it an ideal choice for transferring produced water in oil and gas operations. It can withstand extreme temperatures, pressure, and environmental conditions without cracking or corroding, reducing the risk of leaks and damage.

### FINDING SOLUTIONS

Water wells frequently exhibit subpar water quality, which can lead to deterioration of conventional galvanized piping systems, resulting in joint failures. Select Water has consistently demonstrated efficacy in mitigating such operational disruptions by employing poly pipe. This strategic approach not only minimizes downtime but also optimizes long-term maintenance, thereby directly enhancing customer satisfaction.

### AUTOMATION

Select Water provides automated control on our transfer pumps. The pumps can be controlled remotely by Select technicians to reduce down-time, verify water levels, and improve safety across increasingly complex water networks. This automation provides operators the ability to power the pumps on and off, as well as monitor the flow of water in real-time.

## FAST FUSION

Our poly pipe service can be enhanced with our Fast Fusion machine, offering a cost-effective, durable, and versatile solution for oil and gas companies. With our expertise and cutting-edge technology, we get your operations up and running quickly and efficiently.

## WATER WELL SUPPORT

Our capabilities extend to placing pumps down existing water wells, providing power to and moving water through the poly pipe to the desired location.
